

Graduate Program in Culture and Human Development University of Saskatchewan

The Program in Culture and Human Development at the University of Saskatchewan is inviting qualified applicants to apply for graduate studies. Part of the Department of Psychology, the program houses an active and growing group of faculty and graduate students who are interested in issues of culture, health, and human development across the lifespan. Particular interests include matters of aboriginality, disability, displacement, food, health, and identity. Students receive training in qualitative and/or quantitative methodologies, ranging from population studies to narrative analyses, person-centered ethnography, and critical phenomenology. Our students are supported by graduate research grants, scholarships, and teaching fellowships. Please find more information at <http://artsandscience.usask.ca/psychology/programs/chdevelopment/>

Primary faculty includes:
